Therefore, $D(t) \geq 0$ represents power flows from the micro grid to the external grid and vice versa. The power fluctuation due to intermittent renewable generation and variable load could ...

Hydrogen can be stored physically as either a gas or a liquid. Storage of hydrogen as a gas typically requires high-pressure tanks (350-700 bar [5,000-10,000 psi] tank pressure). Storage of hydrogen as a liquid requires cryogenic temperatures because the boiling point of hydrogen at one atmosphere pressure is -252.8°C .
