The VS3 is the core building block of Invinity's energy storage systems. Self-contained and incredibly easy to deploy, it uses proven vanadium redox flow technology to store energy in an aqueous solution that never degrades, even under continuous maximum power and depth of discharge cycling.

VRFB systems, like any flow battery, use tanks to store an electrolyte -- in this case vanadium, which stores the energy and is circulated through a cell stack to recharge or produce electricity. The architecture of a flow battery enables the energy storage capacity of the battery to be expanded by adding additional tanks and vanadium liquid.

Vanadium Flow Batteries excel in long-duration, stationary energy storage applications due to a powerful combination of vanadium's properties and the innovative design of the battery itself. Unlike traditional batteries that degrade with use, Vanadium's unique ability to exist in multiple oxidation states makes it perfect for Vanadium Flow ...
