While solar energy has many advantages, there are also some drawbacks. Here's a quick look at the main points: The initial cost of solar energy can be high. The biggest hurdle for many homeowners is the initial cost of installing a solar panel system. An average 4kWh solar energy system will cost, on average, £12,000 in the UK.

Disadvantages of solar energy: The production is low during winters and on cloudy days. Installation and the initial cost of the materials are expensive. Space consumption is more. Types of Solar Energy. Solar energy can be classified into two categories depending upon the mode of conversion and type of energy it is converted into.

Solar energy is energy from the sun that we capture with various technologies, including solar panels. There are two main types of solar energy: photovoltaic (solar panels) and thermal. The "photovoltaic effect" is the mechanism by which solar panels harness the sun's energy to generate electricity.

Let's explore the key advantages and disadvantages of solar energy today. Advantages of Solar Energy 1. Reduced green house gases. The first and foremost advantage of solar energy is that, beyond panel production, solar does not emit green house gases.
